

Asset Lifecycle Management

Agenda

- Problem Statement
- Key Features of ALM
- ALM Functional Overview
- About Us

Problems of Manufacturing Sector

Equipment Downtime

Unexpected equipment failures lead to unplanned downtime, directly impacting output and delivery schedules.

Production Delays

Manufacturing units often face delays due to machine breakdowns, bottlenecks, and poor production planning.

Quality Inconsistency

Maintaining consistent product quality is challenging due to process variations and human errors.

Maintenance Inefficiencies

- Maintenance activities are mostly reactive, leading to frequent breakdowns and higher repair costs.

Safety Risks

- Unsafe working conditions and inadequate safety practices lead to accidents and production disruptions.

Limited Visibility & Data Gaps

Lack of real-time visibility into operations makes monitoring performance and decision-making difficult.

Poor Inter-Department Coordination

Inefficient communication between production, maintenance, quality, and supply chain teams causes delays and errors.

Compliance & Audit Pressure

Manufacturers struggle to meet regulatory and audit requirements due to documentation and process gaps.

Key Features of ALM

Key Features

Centralized Asset Repository for all equipment

Equipment calibration tracking

Automated preventive & breakdown maintenance schedule

Department-wise and floor-wise asset tracking

AMC / CMC vendor and contract management

Audit-ready document for compliance verification

Asset depreciation and financial reporting

Mobile-enabled scanning and maintenance updates

Key Features

Multilingual System

Role based access control (Different Menus and Screens/Role)

Extensively designed configurable workflow

Maintain different properties per Asset Types

Advanced Filter Mechanism for all screens

Complete Audit Log of all operations within the system

View & Manage Assets based on Branches/Depts/Locations

Smart Grouping/Linkage of Assets(Child/Parent & Group Assets)

ALM Functional Overview

What ALM Solves for Your Manufacturing Unit

Minimize Unplanned Downtime

Reduce machine breakdowns and production stoppages through proactive maintenance, real-time alerts, and faster corrective workflows.

Complete Asset Visibility

Track every asset across plants, production lines, and departments—including warranty, AMC contracts, lifecycle stage, and depreciation.

Prevent Peak-Load Failures

Schedule preventive maintenance for high-usage machines, utilities, and power systems before peak production cycles.

Lower Maintenance & Operating Costs

Optimize spare usage, reduce emergency repairs, and plan asset replacement using data-driven insights and predictive maintenance.

Plant-Wise Asset Tracking & Visibility

ALM's hierarchical tracking system provides complete visibility into every asset across your manufacturing unit, enabling precise control, faster issue identification, and uninterrupted production.

01

Plant Level

Manage multiple plants from a single dashboard with consolidated performance, maintenance, and compliance reporting.

02

Block/ Shop- Floor Level

Track assets by production blocks, bays, or shop-floor sections to improve resource allocation and maintenance planning.

03

Line / Department Level

Monitor asset performance, breakdown trends, and maintenance frequency by production line or department.

Asset Assignment & Transfer

The **Asset Assignment** feature allows organizations to efficiently allocate, track, and manage ownership or responsibility of assets across departments and employees — ensuring transparency and accountability at every level.

Department-Level Assignment

Assets can be assigned directly to specific departments within a branch. Department heads can monitor asset usage, maintenance, and status in real time, while supporting comprehensive reporting for cost analysis and utilization metrics.

Employee-Level Assignment

Assets can be assigned to individual employees for operational use. The system tracks responsibility, assignment dates, and asset condition — ensuring accountability and simplifying retrieval during transfers or exits.

Asset Serial Number Management

Unique identification ensuring precise tracking and simplified auditing

Unique Identification

Every asset assigned a unique serial number for precise tracking and audit verification

Auto-Generated Numbering

Customizable patterns for different asset types ensuring consistent identification

Serial Number Examples

- **IT Assets:** IT-001, IT-002
- **Furniture:** FUR-001, FUR-002
- **Machinery:** MAC-001, MAC-002

Preventive & Predictive Maintenance

Shift from reactive repairs to proactive machine care. ALM automatically schedules maintenance based on OEM guidelines, machine run-hours, load conditions, and historical failure data—preventing costly breakdowns during peak production cycles.

Critical Assets Covered

- CNC machines & production equipment
- Motors, pumps & compressors
- Gearboxes, conveyors
- Electrical panels
- Boilers, chillers & utility equipment
- DG sets, UPS & backup power systems
- Hydraulic & pneumatic systems
- Fire & safety systems
- Material handling systems

Maintenance Approval Workflow

The **Maintenance Approval Workflow** ensures that high-value or critical assets undergo proper authorization before any maintenance activity begins. This maintains accountability and compliance across the organization while preventing unauthorized or unnecessary service activities.

Automatic Workflow Trigger

1

For assets configured with maintenance approval, the system automatically initiates a workflow based on preset intervals. This ensures timely approvals and prevents unauthorized or missed maintenance activities.

Customizable Trigger Conditions

2

Approval workflows can be extended beyond time intervals to other metrics such as usage, kilometers, hours of operation, or other unit-based measures — providing flexibility for different asset types.

Work Order Management

The **Work Order Management** feature streamlines and automates all maintenance-related activities, especially for vendor-managed assets. It ensures smooth coordination, faster turnaround times, and transparent tracking of every service request from initiation to completion.

Engineering & Safety Compliance

Manage critical plant systems and industrial safety equipment with precision. ALM ensures statutory compliance while maintaining uninterrupted production across all engineering

Plant & Utility Systems

- DG sets & electrical panels
- Boilers, chillers & compressors
- Cooling towers & water system
- STP/RO treatment plants
- Hydraulic & pneumatic systems

Industrial Safety Equipment

- Fire extinguisher refills & testing
- Emergency lighting systems
- Fire alarm & sprinkler checks
- Fire drill logs & documentation
- Evacuation equipment

Vendor & Contract Management

- AMC tracking for critical machines
- Service provider SLAs
- OEN & Vendor performance metrics
- Approval workflows

Grouping of Assets

Efficient Batch Management

Handle multiple assets purchased or serviced together with simplified tracking and unified maintenance.

Logical Grouping

Group similar assets like fire extinguishers, chairs, or CCTV cameras while maintaining individual records

Collective Maintenance

Schedule group maintenance instead of individual tasks, reducing redundancy and ensuring uniform servicing

Shared Contracts

Common purchase details, warranty, or AMC contracts for batch procurements with easier vendor coordination

Asset Groups

Group Name: Workstation Bundle

Asset Scrapping & Scrap Sales – End of Life

- Scrap machines, tools, and equipment based on condition, obsolescence, or remaining salvage value
- Allocate and track **scrap yards / storage locations** for decommissioned machines, spares, and metal waste
- Group or batch scrapped assets by **material type, machine category, or lot** and manage scrap sales (sell-off)
- Record complete **scrap sale details** including buyer information, scrap category, weight, rate, and sale value for audit and compliance

Audit Log

Complete Activity Traceability

Every user action in the system is **automatically captured** for complete traceability and accountability. Administrators can configure which actions should be logged based on organizational needs and compliance requirements.

Comprehensive Data Capture

Logs record user details, machine references, timestamps, and activity types for complete operational accountability.

Transparent Monitoring

Enable transparent monitoring of all operations within the ALM system.

Compliance Support

Support statutory, quality, and safety audits (ISO, Factory Act, OEM audits) by providing structured, tamper-proof activity records.

Security & Detection

Quickly identify unauthorized access, abnormal changes, or policy violations related to machines, maintenance data, or inventory.

Historical Analysis

Review changes and track trends over time with department-wise or user-wise filtering.

Reports

1

Asset Lifecycle Report

Complete chronological view of asset history including purchase date, commissioning details, usage patterns, and disposal information for full lifecycle transparency.

2

Asset Report

Detailed register of all organizational assets with advanced filtering capabilities by department, vendor, assigned employee, and custom attributes.

3

Maintenance History Report

Comprehensive tracking of all maintenance activities, work orders, scheduled services, and vendor performance details with complete audit trails.

4

Asset Valuation Report

Real-time display of current asset worth, depreciation calculations, book values, and total portfolio valuation for financial planning.

5

Workflow & Breakdown History Report

Captures all workflow approval steps, process timestamps, and breakdown incident details for complete operational traceability and accountability.

Multilingual System

The **Multilingual System** feature allows the ALM application to support users across regions and languages, dramatically improving accessibility and usability for global organizations.

Multiple Language Support

The system supports multiple languages, making it usable across different regions and cultural contexts.

Personalized Language Selection

Each user can independently select their preferred language for an optimized experience.

Consistent Translation

All menus, labels, messages, and notifications are consistently translated across the entire system.

Enhanced Accessibility

Employees from different language backgrounds can access and use the system efficiently without language barriers.

Easy Administration

Administrators can add or update languages without impacting system functionality or requiring downtime.

Mobile-Enabled Asset Lifecycle Management

- ALM supports mobile screens that empower users to handle core asset management activities with ease and flexibility.
- Dashboard displays total counts of **Assets, Employees, and Departments** for quick insight.
- Bar code of an asset can be scanned for a quick look up of assignment and maintenance
- Offers a clean, intuitive interface for smooth navigation and efficient mobile asset management.

Improved Accessibility

Access and manage assets anytime, anywhere without relying on desktop computers. Mobile screens eliminate location barriers and keep teams connected.

Enhanced Productivity

Field users and technicians can update asset data instantly, dramatically reducing manual entry delays and improving operational efficiency.

About us

About Rio BizSols Pvt Ltd

Who We Are

A product-based company specializing in innovative software solutions that deliver reliable, scalable, and efficient technology to empower businesses.

Our Expertise

End-to-end software development, system integration, and business process optimization tailored to your unique operational needs.

Client Focus

We partner with organizations to streamline operations, improve productivity, and achieve meaningful digital transformation.

Our Vision: To be a trusted technology partner driving growth and innovation for enterprises worldwide.

Founder – Mr. Tony Rozario

1. 20+ years of expertise in SAP Consulting and Project Management.
2. Global experience across 9+ countries including US, Germany, Saudi Arabia & Australia.
3. Specialist in **SAP Digital Manufacturing**.
4. Skilled in **SAP UI5, HTML, JavaScript, and Integration Technologies**.
5. Deep knowledge of manufacturing processes and system automation.
6. Proven leader in managing cross-functional and global project teams.
7. Successfully delivered multiple large-scale SAP implementations.
8. Worked with leading global clients like **Saudi Aramco, Honeywell, ITC, and Tata Steel**.
9. Renowned for strong client engagement and end-to-end delivery excellence.
10. Visionary founder driving **Asset Lifecycle Management (ALM)** innovation and digital transformation.

Thank You

Ready to transform your asset lifecycle management? Let's discuss how Rio BizSols can help your organization achieve operational excellence.
